Soils formed by terminal moraine in the type: sandy-clayey and clayey soils, medium-compact, stony, medium-permeable. Very favorable for the variety, their structure provides sufficient water and air and rapid warming.

### WEATHER DURING THE GROWING PERIOD

The winter of 2022/2023 was frosty with moderate snow cover. The beginning of spring was frosty, but vegetation started a little earlier than in recent years. May was cool but dry, frosts surprised at the beginning of June. Summer 2023 was very rainy, especially at the end of fruit ripening, which increased disease pressure and forced a large collective selection. The autumn was moderately warm, with heavy rainfall from the middle of the harvest. The harvest started on time.
